

Review all the figures and tables that you generated in this assignment. Write at least three observations or inferences that can be made from the data. Include these observations at the top of your notebook.

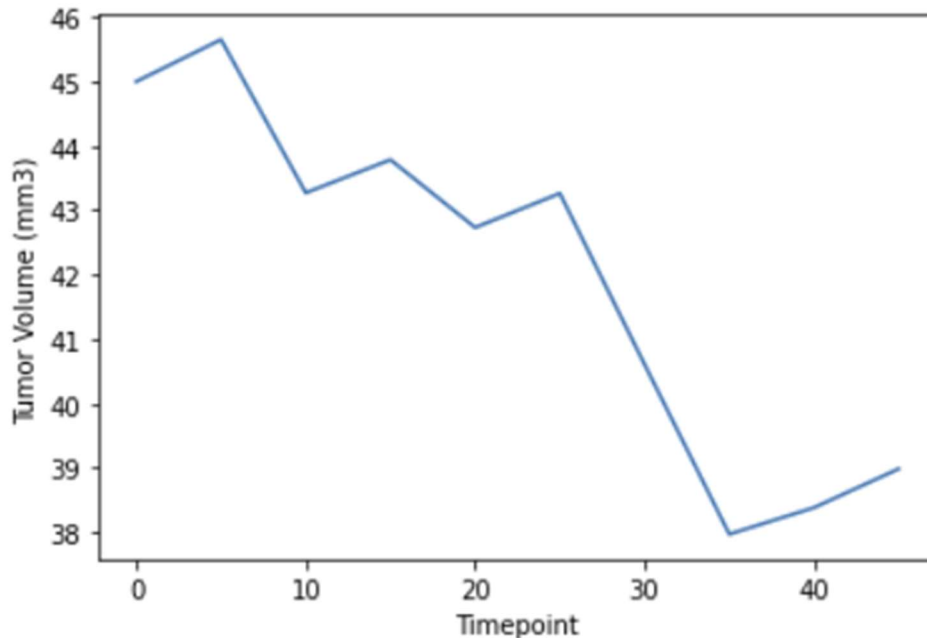

There are 249 mice tested in the data. Male and female is about

```
Out[88]: <AxesSubplot:title={'center':'Sex'}, ylabel='Mouse ID'
```

50% 50%.

Drug “Capomulin” tested on mouse “b128” seems working the tumor size decreases as the Timepoint increases.

Drug “Infubinol” has outlier, it could be the answer for the drugs. Should look into.
